

A•CIP™

Automated Collection Item Processing

Enterprise-class domestic collection teller processing with the flexibility of managing Collection Item Processing from local branches, regional branch clusters and/or centralized backroom.

A•CIP automates the entire Collection Item process for Incoming, Outgoing Cash and Non-Cash Collection drafts. It **increases teller productivity** while creating opportunities to transform your Collection Department into a Profit Center!

Consider these outstanding features of the system:

- 100% Windows compatible; supports Windows client workstation, Citrix and Windows Terminal Server platforms.
- Prints Collection Letters **and** all required customer and General Ledger transaction entries, MICR- and Image capture-ready for processing.
- Handles incoming, outgoing cash or noncash, paid and returned collection items.
- Management of entire branch network from a single SQL database.

Enhances Productivity and Profitability

Multi-user access efficiently services both high volume customers and single transactions.

Tracks how clients are charged, the value of funds on immediate credit items, client credit limits, and fees collected or waived . Provides reporting to update your profitability analysis system.

Customer Profiles can be printed monthly showing transaction detail, fees, float and more.

Bank, Customer and Previous Transaction databases eliminate repetitive entry of information.

Create productivity enhancing drop-down tables for Special Instructions, Return Reasons, Branch information and others.

Provides Strong Audit Control and Powerful Search, Review & Replication

Alerts operators and managers to work Incoming Items that must be processed today.

Multi-level operator security and user-defined operator roles with assigned transaction accessibility.

Complete reporting package including detailed Collection Logs, Customer Profile, Float Reports and Transaction Journal Reports.

Alerts operators when a client's transaction balance reaches client credit limit.

Powerful search, review and replication of stored transactions improves front-line productivity and facilitates research.
